WHAT IS CLAIMED IS:

1. A method for providing a customized computer program to an end user, comprising:

   providing a plurality of program elements; and

   creating an interface arranged to access a group of program elements selected from said plurality of program elements, wherein said interface and said group of program elements are customized for use by said end user.

2. The method of claim 1, wherein the program elements are selected from the group consisting of options, methods and functions or a combination thereof which have the capacity to interact with other programs.

3. The method of claim 1, wherein said interface is implemented upon an operating system.

4. The method of claim 3, wherein said operating system is Windows™.

5. The method of claim 1, wherein said interface comprises tools (or a layer) for an administration of the functions comprised in said program elements and tools (or a layer) for a control of access to said functions.

6. The method of claim 5, wherein said interface further comprises a tool (or a layer) for the control of data flow between functions, comprised in said program elements.
